What is an App?

"An app is a computer software, or a program, most commonly a small, specific one used for mobile devices. The term app originally referred to any mobile or desktop application, but as more app stores have emerged to sell mobile apps to smartphone and tablet users, the term has evolved to refer to small programs that can be downloaded and installed at once"

- Source: Techopedia

Desktop Apps

- Usually standalone
 - Editors / Word processors
 - Web browsers
 - Mail clients
- Often work offline
 - Local data storage
 - Possible network connection
- Software Development Kits (SDK)
 - Custom frameworks
 - OS specific

Mobile Apps

- Targeted at mobile platforms: Phones / Tablets

- Constraints
 - Limited screen space
 - User interaction (touch, audio, camera)
 - Memory / processing
 - Power
- Frameworks
 - OS specific
 - Cross-platform
- Network!
 - Usually network oriented

Web Apps

- The **Platform**
- Works across OS, device: create a common base
- Heavily network dependent
 - Workarounds for offline processing

Our main focus in this course ...
